AND
THE UNIFIED POLICE DEPARTMENT OF
GREATER SALT LAKE

PRESENT:

INTERMEDIATE DIGITAL IMAGING

The Unified Police Department of Greater Salt Lake is proud to announce that it is hosting a five-day, hands-on training program in forensic digital imaging the week of June 7 - 11, 2010 at the Unified Police Department of Greater Salt Lake, (formerly known as the Salt Lake County Sheriff's Office) Forensic Investigations Unit in Salt Lake City, UT.¹

This five-day course will provide participants with a comprehensive understanding of the Microsoft® Windows® environment as well as develop a thorough understanding of Adobe® Photoshop®. In addition, participants will have a thorough understanding of digital imaging concepts and how these concepts can aid in the forensic investigative process. Participants will benefit from applying these newly learned concepts in a practical exercise using their own images!

This hands-on training program will focus on **intermediate** imaging concepts and techniques for enhancing digital photographs, preparing proof sheets, creating court exhibits and more. It will also provide an advanced understanding of digital imaging technologies as well as deliver an indispensable understanding of and hands-on experience with the most commonly used image enhancement tools. For example, you will learn how to scale digital images for accurate, life-size output as well as learn the recommended procedures for enhancing various types of images for maximum image quality and contrast. You will also learn how and when to apply different techniques to remove background noise as well as how to enhance contrast to bring out ridge detail that is barely visible to the human eye.

Each student must bring a minimum of five images on compact disk to be enhanced as part of their practical exercises. These images can be either latent prints, questioned documents, surveillance photos, and so forth. Students are encouraged to use images that will test their skill, but that will not frustrate them during the learning process.

David Witzke, better known as Ski, has more than 14 years of experience with forensic digital imaging and AFIS technologies. His extensive background covers all facets of software development, user and technical documentation development, systems integration and installation, technical support, and training. Ski has been conducting forensic digital imaging training programs for law enforcement agencies at all levels (local, state and federal) throughout the United States, Canada and England for more than eight years. He has an established reputation in forensic image processing and is frequently a guest speaker at regional and international conferences in the United States and abroad. He has also taught forensic digital image processing for the Latent Print Program at the FBI Academy in Quantico, Virginia as well as at the British Columbia Institute of Technology in Vancouver, British Columbia, Canada.

¹ *Participants must attend all five days of training. It is also recommended that each person attending this program have at least a basic understanding of the Microsoft Windows NT, 2000, ME, or XP operating system.*
